

REMARKS

This Application has been carefully reviewed in light of the Office Action mailed July 9, 2007. In the Office Action, Claims 19-25 and 34-39 were rejected. In response to the Examiner's restriction and request for election, Claim 1-18 and 26-33, treated by the examiner as having been withdrawn from consideration, have been cancelled without prejudice or disclaimer. Claims 19-25 and 34-39 remain pending in the Application. Applicants respectfully request reconsideration and favorable action in this case.

In the Office Action, the following actions were taken or matters were raised:

SECTION 102 REJECTIONS

Claims 19-25 and 34-39 were rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Patent No. 6,664,969 issued to Emerson et al. (hereinafter "*Emerson*"). Applicants respectfully traverse this rejection.

Of the rejected claims, Claims 19 and 34 are independent. Applicants respectfully submit that each of independent Claims 19 and 34 are patentable over *Emerson*. For example, Claim 19 recites "comparing graphics image data of a new image for a particular destination device of a plurality of destination devices with graphics image data of a previous image for said particular destination device stored in a region of a frame buffer . . . assigned to said particular destination device" (emphasis added). *Emerson* appears to disclose that video graphics data is analyzed to detect a change by dividing the video graphics data in a frame buffer into manageable blocks so that the blocks may be compared for previously transmitted data and current data (*Emerson*, column 7, lines 21-39). However, *Emerson* does not appear to disclose or even suggest assigning different portions or regions of a frame buffer to particular destination devices. Thus, Applicants respectfully submit that *Emerson* does not disclose or even suggest "comparing graphics image data of a new image for a particular destination device of a plurality of destination devices with graphics image data of a previous image for said particular destination device stored in a region of a frame buffer . . . assigned to said particular destination device" as recited by Claim 19 (emphasis added). Therefore, for at least this reason, Applicants respectfully submit that *Emerson* does not anticipate Claim 19.

Independent Claim 34 recites "a graphics adapter configured to compare graphics image data of a new image for a particular destination device of a plurality of destination devices with graphics image data of a previous image for said particular destination device stored in a region of a frame buffer . . . assigned to said particular destination device" (emphasis added). Thus, at least for the reasons discussed above in connection with independent Claim 19, Applicants respectfully submit that Claim 34 is also not anticipated by *Emerson*.

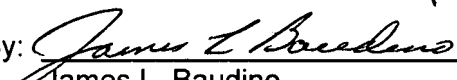

Claims 20-25 and 35-39 that depend respectively from independent Claims 19 and 34 are also not anticipated by *Emerson* at least because they incorporate the limitations of respective Claims 19 and 34 and also add additional elements that further distinguish *Emerson*. Therefore, Applicants respectfully request that the rejection of Claims 19-25 and 34-39 be withdrawn.

CONCLUSION

Applicants have made an earnest attempt to place this case in condition for immediate allowance. For the foregoing reasons and for other reasons clearly apparent, Applicants respectfully requests reconsideration and full allowance of all pending claims.

No fee is believed due with this Response. If, however, Applicants have overlooked the need for any fee due with this Response, the Commissioner is hereby authorized to charge any fees or credit any overpayment associated with this Response to Deposit Account No. 08-2025 of Hewlett-Packard Company.

Respectfully submitted,
